Work Experience

Revpool LTD

Warrington, UK

SOFTWARE ENGINEER (REMOTE)

Nov 2023 - Present

- Working on the software that allows professional **sports bettors** to place **automatic bets** on hundreds of market makers without having to manage the complexity behind it.
- Reversed APIs from various external sites and implemented custom clients in **Go**, which return normalized data to build an **aggregator** of external **data sources**.
- Managed a globally distributed private **proxy network**, implemented through redundant servers that communicate with multiple Internet-exposed nodes using a custom protocol built over **QUIC**, adding support for consistent user sessions.
- Implemented a customizable **website scraper** in Go that perfectly emulates different browsers, replicating advanced fingerprinting techniques with absolute precision to **bypass the anti-bot** protections of popular **CDNs**.

GardaWorld Security - Crisis24

Konstanz, Germany

SOFTWARE ENGINEER (REMOTE)

Sep 2022 - Nov 2023

- Worked on a SaaS platform in the **Travel Risk Management** sector, which enables employees to stay safe while traveling, using sensitive data such as their location to send personalized security alerts. Crisis24 services are used by **50% of Fortune 500** companies.
- Improved the **Ruby on Rails** application backend by fixing tons of bugs and adding new features, modifying the **Ember.js** frontend when necessary.
- Reduced by 15% the average response time of internal **Ruby** microservices & exposed **GraphQL APIs** used by third-party software, by optimizing the **Redis** caching layer for the production environment on **Google Cloud**.
- Replaced a dataset that hadn't been updated in 10 years with a **Python** project created from scratch that dynamically builds an updated country border dataset using OpenStreetMap data and the Shapely library, saving the result in a **PostgreSQL** (with PostGIS) database.

Skills

Languages Go, Python, C, Java

Database PostgreSQL, Redis, Apache Cassandra, MongoDB

Backend Distributed Systems, Microservices, Git, Docker, Google Cloud Platform

Projects

Go Programming Language

Open Source Contributor

- Made **6 proposals** for code changes and 3 of them were accepted by the project maintainers and are now part of the Go compiler code.
- One of these changes is an optimization that **increased encoder initialization performance for Base32 and Base64 by 40%** by changing memory initialization implementation.

BigMetric

- Designed a distributed system to process **thousands of temperature sensor readings** and save the result into an **Apache Cassandra** database cluster, and then visualize the results using **Grafana** time series charts.
- The sensors send the temperature value every 10 seconds to various **Java Spring microservices** using **Apache Kafka**.
- Written appropriate unit and integration tests to check the correctness of results.

Serializer to Binary Object Representation

- Created from scratch a **MessagePack serializer** (JSON-compatible binary format) that accepts native **Go** values as input and converts them correctly using runtime **reflection**.
- Made the code easy to read, reaching **95% code coverage in tests**.

Education

Technical Institute Francesco Severi

Padova, Italy

A.S. COMPUTER SCIENCE

- Software Engineering & Programming (Java, C), Concurrent Programming (Java), Algorithms & Data Structures (Java)
- Web Development - Backend (PHP, MySQL) & Frontend (HTML, CSS, Javascript)
- Operating Systems, Computer Networks, Distributed Systems (Designing Data-Intensive Applications)

Certifications

2022	<u>Apache Cassandra 3 Associate Developer (DataStax)</u>
2022	<u>MongoDB 5.0 Associate Developer</u>
2021	<u>Google Cloud Developer Specialization</u>
